FloodWise MY

1. Required Data

Requirement / Objective	Needed information / feature	Candidate source	Why usable / constraint
O1: Document-grounded flood preparedness assistant	Malaysian flood reports, preparedness information, evacuation information and disaster updates	ReliefWeb: Malaysia Floods Nov 2025 and Malaysia Floods Nov 2024	Provides Malaysia-specific disaster reports and flood situation information. Reports are historical and must not be treated as live flood conditions.
O1, O2: Retrieve relevant flood information	Flood situations, river levels and related flood-monitoring information	Public InfoBanjir (JPS)	Relevant to Malaysian river and flood monitoring. Source collection and access method are still to be finalised during the source audit.
O1, O2: Retrieve weather warning information	Weather warnings and continuous rain information	MetMalaysia	Provides official Malaysian weather information. Warning information can change, so its issue and update dates must be retained. Source selection is still to be finalised during the source audit.
O2: Source citations and evidence-grounded answers	Source URL, document title, issuing organisation, publication/update date and supporting passages	ReliefWeb, JPS and MetMalaysia	Supports source traceability. Each answer should include citations linked to the retrieved evidence.

O2: Abstention when evidence is insufficient	Relevant retrieved passages and evidence for determining whether a question can be answered	Selected official flood information sources	Supports the system's ability to decline unsupported questions rather than generate unverified information.
O3: Evaluation of answer quality and retrieval	30 to 50 manually verified benchmark questions with expected answers and supporting sources	Project-created evaluation dataset based on selected flood sources	Allows evaluation of retrieval relevance, information accuracy, citation correctness, unsupported-claim rate and response latency. Questions and reference answers must be manually checked.
Responsible AI: Information freshness and provenance	Source identity, source URL, publication/update date and date last checked	ReliefWeb, Public InfoBanjir and MetMalaysia	Helps prevent outdated information from being presented as current. The assistant should display the data date and direct users to official portals for live updates.

3. Inspection Evidence

Inspection 1: ReliefWeb Malaysia Floods Nov 2025

#	Observation	Evidence / source information	Implication
1	The source is specific to Malaysian flood events.	ReliefWeb Malaysia Floods Nov 2025.	Relevant to the Malaysian flood preparedness domain.
2	The information relates to a particular disaster period.	Source URL: https://reliefweb.int/disaster/FL-2025-000211-MYS	Retain the publication date and disaster period to avoid treating historical information as current.
3	The source can support disaster-related questions.	The source is included in the FloodWise MY data source list.	Relevant reports can be selected for the document-grounded knowledge base.
4	Information may become outdated.	The report covers a specific flood event.	Display the source date and avoid presenting historical reports as live flood status.

Inspection 2: ReliefWeb Malaysia Floods Nov 2024

#	Observation	Evidence / source information	Implication
1	The source provides information about an earlier Malaysian flood event.	ReliefWeb Malaysia Floods Nov 2024.	Can provide historical disaster context.

2	It covers a different period from the November 2025 source.	Source URL: https://reliefweb.int/disaster/fl-2024-000218-mys	The two sources can provide information from different flood events.
3	Historical information may not reflect current conditions.	The source refers to the November 2024 flood event.	The assistant must distinguish historical reports from current flood information.

Inspection 3: Public InfoBanjir (JPS)

#	Observation	Evidence / source information	Implication
1	The source is identified in the project data source list.	https://publicinfobanjir.water.gov.my/	Relevant candidate for Malaysian flood and river monitoring information.
2	The source provides information that may change over time.	Public flood-monitoring portal.	The retrieval or access date should be recorded.
3	The source audit is not yet finalised.	To be finalised during Week 2 source audit.	Confirm the exact data fields, access method and collection format before ingestion.

Inspection 4: MetMalaysia

#	Observation	Evidence / source information	Implication
1	The source is identified in the project data source list.	https://www.met.gov.my/	Relevant candidate for official Malaysian weather warnings.
2	Weather warnings can change over time.	Official meteorological warning information.	The warning issue/update date must be retained.

3	The source audit is not yet finalised.	To be finalised during Week 2 source audit.	Confirm the relevant warning categories, access method and collection format before ingestion.
